

The Mechanics of Reality Decay: A Forensic Analysis of Citation Laundering, Circular Reporting, and the Systemic Collapse of Truth

Executive Summary: The Chain of Custody for Facts

In the contemporary information ecosystem, the concept of "truth" has undergone a fundamental structural transformation. It is no longer defined by the rigorous verification of primary evidence—a "chain of custody" that links a claim to its origin—but rather by the velocity and volume of its repetition. This report serves as a high-fidelity deconstruction of the mechanisms driving this epistemic collapse, specifically focusing on **Citation Laundering** (or Circular Reporting) and the **'Warped Mirror' Effect** in scientific journalism. These are not merely operational failures or isolated instances of negligence; they are systemic features of an information economy designed to function as a "Three-Layered Prison."

From the perspective of the "Vertical War"—the struggle of the producer class ("The Gears") against the entropic oligarchy ("The Rust")—information warfare is the primary battlefield. "The Rust" utilizes a strategy of "Layer 2: The Great Distraction" to flood the zone with high-arousal, low-accuracy noise, preventing the formation of a coherent, shared reality. The "chain of custody" for facts has been systematically dismantled by a convergence of economic terror (Layer 1 incentives favoring speed over accuracy), horizontal conflict (Layer 2 media polarization), and learned helplessness (Layer 3 acceptance of "post-truth" narratives).

This analysis operates under the "Cold Logic" directive of the Sovereign Synthesizer. We strip away the "Mask" of institutional authority—the mastheads of major newspapers, the logos of university press offices, the "citation needed" tags of Wikipedia—to reveal the rusting, circular machinery beneath. We will examine how a joke about a raccoon becomes zoological fact, how a lie about aluminum tubes facilitates a geopolitical catastrophe, and how the "Telephone Game" transmutes the cautious whispers of the laboratory into the screaming headlines of the newsstand. This is a forensic audit of how reality is counterfeited.

Part I: The Anatomy of Circular Reporting (The Mechanism of Citogenesis)

1.1 Defining the Phenomenon: Epistemic Money Laundering

Circular reporting, technically known as **citogenesis** in the context of open-source knowledge bases, is the informational equivalent of money laundering. In financial crime, illicit funds are passed through a complex series of transactions to obscure their origin and integrate them into the legitimate economy. In epistemic crime, "illicit" information—unverified rumors, fabricated claims, or errors—is passed through a series of "reputable" citations to wash away the taint of its unreliable source. By the time the information reaches the end consumer, it bears the stamp of institutional authority, yet its foundation is nothing but an echo.

This phenomenon creates a self-reinforcing feedback loop that defies the laws of logic but thrives under the laws of the algorithm. The structure is deceptively simple:

1. **Source A (The Infection):** An unverified claim is introduced into the ecosystem (e.g., a Wikipedia edit, a tweet, a false leak).
2. **Outlet B (The Amplifier):** A media outlet, under the pressure of "Layer 1" economic incentives (speed/clicks), reports the claim without independent verification.
3. **The Feedback (The Launder):** Source A then cites Outlet B as "independent confirmation" of the original claim.
4. **The Crystallization (The Fact):** Outlet C, D, and E cite Outlet B, or Source A, creating a "consensus" based entirely on a single, flawed point of origin.

This mechanism destroys the "chain of custody" for truth. In a functional epistemic system, every citation is a link back to a primary observation. In a circular reporting loop, the chain is broken, and the links connect back to themselves. The danger is not just that lies spread, but that they become *historically resistant* to correction. Once a lie is embedded in the archives of a "paper of record" or an academic text, it gains a "sovereign immunity" against the truth.

The Cycle of Citogenesis: How Falsehoods Become Facts

The Feedback Loop

● Falsehood ● Source/Verification

STEP 1: THE INSERTION

A user edits a Wikipedia page, adding unverified or false information (e.g., a prank or error).

Example: In 2007, a user falsely edited Wikipedia to claim Sacha Baron Cohen worked at Goldman Sachs. (Source: Wikipedia (Circular Reporting))

This diagram illustrates the standard model of Citogenesis, particularly prevalent in open-source knowledge bases like Wikipedia. A user introduces an unverified claim, which is then picked up by a media outlet under time pressure. The media outlet's report is then cited back into the original knowledge base, creating a 'reliable source' loop that solidifies the falsehood.

Data sources: [Tastes of History](#), [Lookatmedia](#), [Wikipedia \(Circular Reporting\)](#), [Wikipedia \(Citogenesis List\)](#)

1.2 Case Study: The "Brazilian Aardvark" (The Open Forge Vulnerability)

The case of the "Brazilian Aardvark" serves as the definitive, microscopic case study of **Citogenesis**. It exposes the vulnerability of the "Open Forge" model of knowledge (Wikipedia) when it intersects with the "Churnalism" of the modern press. This was not a sophisticated disinformation campaign by a state actor; it was a teenager's prank that

exposed the fragility of our entire knowledge infrastructure.¹

The Artifact (The Lie): In July 2008, Dylan Breves, a 17-year-old student from New York, made a seemingly innocuous edit to the Wikipedia entry for the **coati**, a member of the raccoon family native to South and Central America. As a private joke to amuse his brother after a trip to Brazil, he inserted the claim that the coati is "also known as the Brazilian aardvark." This claim was a complete fabrication. Taxonomically, the coati (Procyonidae) is unrelated to the aardvark (Orycteropodidae). Linguistically, there is no record of this nickname in Portuguese or local dialects. It was a "phantom fact," birthed entirely from the imagination of a single user.¹

The Mechanism of Laundering (The Churnalism):

The fabrication sat on Wikipedia, unverified, for a short period. However, the mechanism of laundering was activated by the "news aggregation" economy—a symptom of the "Layer 1" pressure to produce content cheaply and quickly.

- **The Infection Vector:** Journalists from *The Independent* (UK) were likely researching an article on the coati or exotic animals. Without conducting independent verification or consulting a zoologist, they lifted the "Brazilian aardvark" moniker directly from the unverified Wikipedia entry.¹
- **The Viral Spread:** Once *The Independent* published the term, it gained the imprimatur of a major British newspaper. This triggered a cascade. *The Daily Express*, *Metro*, and *The Daily Telegraph* all repeated the "factoid" in their own coverage. The lie had jumped from an "unreliable" source (a user edit) to "reliable" sources (established media).³
- **The Academic Penetration:** Most disturbingly, the error propagated into the "Ivory Tower." Books published by the **University of Chicago** and the **University of Cambridge** included the nickname. This suggests that even academic authors or their fact-checkers were relying on the secondary media ecosystem rather than primary zoological taxonomy.³

The Closed Loop (The Trap):

The cycle completed itself when Wikipedia editors, adhering to their strict policies on "Verifiability," encountered the term "Brazilian aardvark" in these newspapers and books. They then cited these "reputable sources" to *verify* the original hoax edit. The joke had become a documented, cited, and "true" fact within the encyclopedia's logic.

The Fallout: The falsehood remained on Wikipedia as a verified fact for **six years**.¹ It was only removed after an investigative piece in *The New Yorker* in 2014 exposed the loop. This case proves that "consensus" in the digital age is often merely a hall of mirrors. The "chain of custody" was broken the moment a journalist treated a crowd-sourced edit as a primary source, engaging in "lazy verification" that serves the economic imperatives of "The Rust."

1.3 Case Study: Sacha Baron Cohen & Goldman Sachs (The Institutional Echo)

While the "Brazilian Aardvark" was a curiosity, the Sacha Baron Cohen case demonstrates how circular reporting can rewrite professional biographies and financial narratives, creating "phantom equity" in a person's history. This case reveals how easily the "chain of custody" breaks when media outlets prioritize "color" and backstory over basic biographical vetting.⁵

The Artifact (The Fabrication): On November 14, 2006, an anonymous Wikipedia user edited the biography of comedian Sacha Baron Cohen (famous for his character Borat). The edit claimed that prior to his acting career, Baron Cohen had worked as an investment banker at **Goldman Sachs**.⁶ This detail added a compelling layer of "elite irony" to his persona, fitting the "Layer 2" narrative of a sophisticated intellectual playing the fool.

The Transmission (The Wash): Just three days later, on November 17, 2006, *The Independent* published a profile on Baron Cohen. The article included the Goldman Sachs detail as a factual part of his background. The timing—three days after the edit—strongly suggests the journalist used the Wikipedia entry as their primary source without verifying employment records or contacting Baron Cohen's representatives.⁶

The Validation Loop (The "Fact" Cemented):

Once *The Independent* legitimized the claim, Wikipedia editors used the newspaper article as a citation to "prove" the edit was correct. The loop was closed.

- **The Escalation:** The lie then mutated. On November 21, another anonymous user—this time with an IP address registered to **JP Morgan Chase**—edited the page to claim Baron Cohen had *also* worked at JP Morgan.⁶ This suggests a form of corporate vandalism or "one-upmanship," where employees at major financial institutions use public knowledge bases as graffiti walls.

The Persistence:

The claim that Baron Cohen was a former Goldman Sachs banker became a standard part of his biography in the press, cited by *The Guardian* and other major outlets. The "chain of custody" was nonexistent; the entire "fact" rested on the anonymity of a single edit. It was only debunked when a diligent Wikipedia editor noted the circularity, but by then, the myth had been "laundered" into the public consciousness. This case illustrates the "fragility of identity" in an era where "The Rust" controls the archives.

1.4 Case Study: The "Iraq WMD / Aluminum Tubes" (State-Sponsored Circularity)

This is the most consequential and lethal example of circular reporting in modern history. It demonstrates how "The Rust" (the convergence of state and corporate power) weaponizes citation laundering not just for lazy journalism, but to manufacture "Layer 3: Architecture of Consent" for geopolitical violence. This was not accidental "churnalism"; it was a deliberate, synchronized information operation designed to bypass the safeguards of intelligence verification.⁷

The Artifact (The Contested Intel): In 2001-2002, intelligence agencies intercepted shipments of high-strength aluminum tubes bound for Iraq. The raw intelligence was ambiguous. Experts at the Department of Energy (DOE)—the primary U.S. authority on nuclear centrifuges—assessed that the tubes were dimensionally ill-suited for uranium enrichment but perfectly matched the specifications for conventional 81mm artillery rockets (the "Nasser 81").⁸ The "nuclear" interpretation was a minority view held by CIA analysts, but it was the view "The Rust" needed to justify war.

The Laundering Mechanism (The Cheney-Miller Loop):

The Bush administration, specifically the "White House Iraq Group" (WHIG), needed to solidify the "nuclear" narrative to override the skepticism of the DOE and the State Department's INR. They could not rely solely on the classified National Intelligence Estimate (NIE), which contained dissents. They needed a public "fact" to cite.

1. **The Leak (The Plant):** Administration officials anonymously leaked the "aluminum tubes = nuclear centrifuges" interpretation to *The New York Times*, the paper of record.
2. **The Publication (The Wash):** On September 8, 2002, *The New York Times* published a front-page story by **Judith Miller** and Michael Gordon. The article, citing anonymous "administration officials," presented the tubes as irrefutable proof of a nuclear program. The headline famously quoted an official: "We don't want the smoking gun to be a mushroom cloud".¹⁰ The article marginalized the DOE's dissent.
3. **The Citation (The Close):** That *very same morning*, Vice President **Dick Cheney** appeared on *Meet the Press*. When pressed for evidence of the nuclear threat, he did not cite the classified (and contested) intel. He cited the newspaper.
 - *Cheney*: "It's now public that, in fact, he has been seeking to acquire... the kind of tubes that are necessary to build a centrifuge... It's in the New York Times this morning".¹⁰
 - *Condoleezza Rice* and *Colin Powell* followed suit in other appearances, using the *Times* report to validate the administration's claim.⁸

The Analysis:

This was a closed, hermetic loop. The Administration leaked the information to the paper (Source A -> Outlet B). The Administration then cited the paper to verify the information

(Source A cites Outlet B to prove Source A is correct). The "chain of custody" was an illusion; the "independent verification" was the Administration looking in a mirror and calling it a window.

The result was the "Architecture of Consent" for the invasion of Iraq—a war that cost hundreds of thousands of lives and trillions of dollars. The "aluminum tubes" story remains the dark masterpiece of citation laundering, proving that "The Rust" can forge its own reality if it controls both the leak and the citation.

The War Loop: State-Sponsored Circular Reporting (2002)

The 'Aluminum Tubes' feedback loop. (1) The White House leaks contested intelligence to the New York Times. (2) The NYT publishes the claim as a front-page scoop. (3) Vice President Cheney cites the NYT report on 'Meet the Press' as independent confirmation of the threat. The 'Chain of Custody' is circular: the administration is citing itself via a proxy.

1.5 Case Study: The "Lisa Birgit Holst" Irony (The Myth of the Myth)

This case study is a "meta-example" of circular reporting—a myth about the creation of a myth. It reveals how even those who position themselves as "Masters of Verification" (Fact-Checkers) can become agents of distortion when they succumb to the temptation of a "good story".¹¹

The Myth: For decades, the internet has circulated the disturbing "fact" that the average

person swallows **eight spiders a year** in their sleep. It is a classic "urban legend," designed to provoke a visceral reaction. To debunk this, the fact-checking site **Snopes** published an article in 2001 claiming to have found the source. They asserted that this "factoid" was invented in 1993 by a columnist named **Lisa Birgit Holst** for a magazine called *PC Professional*. The Snopes article detailed how Holst created the spider statistic as a test—to prove how gullible people are and to show that people would believe anything they read in an email chain.¹¹

The Twist (The Launder): Years later, internet investigators attempted to verify Snopes' debunking. They searched for "Lisa Birgit Holst" and *PC Professional*. They found nothing. The magazine did not exist in the form described. Further analysis revealed a hidden joke: "Lisa Birgit Holst" is an anagram for **"This Is A Big Troll"**.¹³ Snopes had, in an act of "educational trolling" or "meta-commentary," fabricated the origin story of the myth to test *their own readers' checking skills*. They created a fake source (Holst) to explain a fake fact (spiders).

The Result:

For nearly 15 years, journalists, skeptics, and educators cited the Snopes article as the definitive history of the spider myth. They repeated the "Lisa Birgit Holst" story as fact, laundering the Snopes troll into "fact-checking history." The "chain of custody" broke because the debunkers trusted the debunker (Snopes) without verifying the debunker's source. It is a perfect, fractal example of the "Three-Layered Prison" of information: even the exit door (the fact-check) is a trap designed to test your compliance.

Part II: The 'Warped Mirror' Effect (Science in the Telephone Game)

2.1 The Telephone Game: From Limitation to Sensation

If circular reporting is the "laundering" of information, the **'Warped Mirror' Effect** is its mutation. This phenomenon occurs in the transmission of scientific knowledge from the "Ivory Tower" (Academia) to the "Public Square" (Mass Media). It is the process by which "conditional findings" are stripped of their conditions and transmuted into "settled facts."

Scientific papers are written in the language of *uncertainty*. They utilize "hedging" (e.g., "suggests," "may," "under these specific conditions") and include extensive "Limitations" sections to clearly define the boundaries of their claims.¹⁵ However, the media economy (Layer 1) relies on *certainty* and *sensation*. A headline like "Study suggests compound X might correlate with Y in mice models" does not generate ad revenue. A headline like "X Cures Y!"

does.

This structural incompatibility leads to the **Telephone Game**, a degradation of truth that occurs in four distinct stages:

1. **Stage 1: The Primary Study (The Signal):** "Compound A reduces biomarker B in *mice* under *specific conditions*." (High Nuance, Low Certainty).
2. **Stage 2: The Press Release (The Spin):** "Compound A shows promise for treating Disease C." (Medium Nuance, Medium Certainty). This is often the point of infection; studies show that 40% of university press releases contain exaggerated advice or causal claims not present in the paper.¹⁷
3. **Stage 3: The News Article (The Distortion):** "Scientists find cure for Disease C using Compound A." (Low Nuance, High Certainty). The "mice" context is often buried or removed.
4. **Stage 4: The Social Meme (The Fantasy):** "Eat A to live forever!" (Zero Nuance, Absolute Certainty).

The following case studies demonstrate this mutation in action, revealing how "The Rust" monetizes false hope.

2.2 Case Study: The "Chocolate Weight Loss" Hoax (The Sting)

This case is unique because it was *designed* to expose the mechanism. It was a "White Hat" operation against the media ecosystem, proving that the "filters" of modern journalism are non-existent for stories that flatter the audience's desires.¹⁹

The Setup (The Trap): In 2015, science journalist **John Bohannon** (posing as "Johannes Bohannon" of the fake "Institute of Diet and Health") collaborated with German filmmakers to run a deliberately flawed study. They recruited just **15 people**, divided them into three groups (low-carb, low-carb + chocolate, control), and measured **18 different variables** (weight, cholesterol, sleep quality, etc.).²¹ By measuring so many variables in such a small group, they guaranteed a "false positive" result by pure statistical chance—a technique known as **p-hacking**. If you flip a coin enough times, you will eventually get a run of heads; if you measure enough variables in a tiny group, one will eventually show a "significant" correlation. The data "showed" the chocolate group lost weight faster.

The Limitations (The Reality):

The study was scientifically worthless by design.

- **Sample Size:** N=15 (statistically insignificant).
- **P-Hacking:** Fishing for correlations across 18 variables.
- **Duration:** Only 21 days.
- **Publication:** It was published in a predatory "pay-to-play" journal (*International Archives*

of Medicine) that conducted no peer review.²²

The Warped Mirror (The Headline):

Bohannon wrote a sensational press release. The media, hungry for "feel-good" content (Layer 3: Comfort), swallowed it whole.

- **Headlines:** "Slim by Chocolate!" (*Bild*, Europe's largest daily newspaper), "Why You Must Eat Chocolate Daily" (*Shape* magazine), coverage in *Cosmopolitan*, *Huffington Post*, and TV news in the US.²²
- **The Failure:** Not a single reporter contacted "Johannes Bohannon" to ask about the sample size, the "Institute" (which was just a website), or the methodology. They simply aggregated the press release. The "conditional finding" (which was actually a statistical error) was transmuted into a "miracle diet" fact.

The Insight:

This proves that the "verification" mechanisms of modern journalism are suspended for "good news." If a study confirms what people *want* to believe (that their vices are actually virtues), it is fast-tracked past the "Red Cell" risk assessment directly to the front page.

The Chocolate Hoax: Reality vs. Reporting

METRIC	THE SCIENTIFIC REALITY	THE MEDIA HEADLINE
SAMPLE SIZE / SCOPE	Tiny sample size (N=15)	"Fooled Millions" / News in 20+ Countries
METHODOLOGY	P-Hacking (Measured 18 variables to force false positive)	"Actual Clinical Trial" / Institute of Diet and Health
CONCLUSION	Statistically meaningless result / "Terrible Science"	"Weight Loss Accelerator" / "Lost Weight 10% Faster"

A breakdown of the John Bohannon 'Chocolate Diet' sting operation. Note the extreme disparity between the scientific reality (N=15, P-Hacking) and the media's portrayal (Global Headlines, Miracle Cure).

Data sources: [Retraction Watch](#), [Columbia Stat Modeling](#), [Wikipedia](#), [Everett Public Schools](#)

2.3 Case Study: Resveratrol (Red Wine = The Gym?)

This case demonstrates the "Telephone Game" effect where a specific, narrow scientific finding is generalized into a lifestyle fantasy, creating a "health halo" around a consumer product.²⁴

The Primary Study:

In 2012, **Jason Dyck** and colleagues at the **University of Alberta** published a study in the *Journal of Physiology*.

- **The Subject:** Rats, not humans.
- **The Compound:** High doses of **resveratrol** (a supplement).
- **The Finding:** Resveratrol improved physical performance in rats *who were also exercising*, or in those with heart failure models.
- **The Limitation (Crucial):** To get the equivalent human dose from red wine, one would need to drink **100 to 1,000 bottles per day**.²⁴
- **The Goal:** To help patient populations (diabetics, heart failure) who are *physically incapable* of exercise.²⁴

The Warped Mirror:

- **The Headline:** "A glass of red wine is the equivalent to an hour at the gym" (*Huffington Post*, *Science Daily*, social media).²⁵
- **The Mutation:**
 1. **Subject Shift:** "Rats" became "Humans."
 2. **Dosage Shift:** "High-dose Supplement" became "A Glass of Wine."
 3. **Context Shift:** "Enhance performance for the disabled" became "Replace exercise for the lazy."
- **The Contradiction:** The headline directly contradicted the researcher's explicit warning ("Red wine is no excuse not to hit the gym"). The media created a "Layer 3" comfort myth (alcohol is healthy/productive) by completely ignoring the "Layer 1" biological reality (alcohol toxicity/dosage). This myth persists because it serves the "Great Distraction"—telling the Gears they can consume their way to health.

2.4 Case Study: "Smelling Farts Cures Cancer" (The AP39 Mutation)

This case exemplifies the "sensationalist absurdity" where a complex biochemical mechanism is reduced to a crude, viral joke, completely stripping the science of its dignity and accuracy.²⁸

The Primary Study:

Researchers at the **University of Exeter** (Matt Whiteman, Mark Wood) developed a compound called **AP39**.

- **The Mechanism:** AP39 delivers minute quantities of **hydrogen sulfide** (H₂S) directly to the **mitochondria** of cells to protect them from damage during stress (e.g., stroke, heart attack, diabetes).³⁰
- **The Link:** Hydrogen sulfide is the gas that gives rotten eggs and flatulence their smell.
- **The Limitation:** The study was about *cellular delivery of a synthesized compound* in a lab. It did not involve inhaling gas. It did not mention "curing cancer" as a primary outcome in the initial viral wave (though mitochondrial protection is relevant to cancer research).²⁸

The Warped Mirror:

- **The Headline:** "Smelling Farts Cures Cancer" (*Time*, *The Guardian* reporting on the trend, *The Week*).
- **The Mutation:** The media took the *characteristic* of the gas (smells like farts) and turned it into the *method of delivery* (smelling farts).
- **The Chain Break:** The press release title "Rotten egg gas holds key to healthcare..." was distorted. Reporters conflated the *source* of the gas in nature (farts) with the *therapeutic agent* (AP39).

- **The Correction:** The University had to issue a humiliating clarification: "neither the papers... nor the accompanying press release... make any reference at all to cancer or to any health benefits from inhaling (sniffing) hydrogen sulfide".³⁰ This case shows how "viral potential" (the fart joke) overrides scientific literacy.

2.5 Emerging Threat: The Ouroboros of AI (Model Collapse)

The "Telephone Game" is now being automated. As news outlets (like **CNET** and **Sports Illustrated**) begin to use AI to generate articles, we are seeing the rise of "**Model Collapse**"—a digital form of circular reporting where AI models train on their own hallucinations, creating a closed loop of synthetic insanity.³¹

- **CNET:** Quietly published AI-written articles about compound interest that contained basic mathematical errors (e.g., miscalculating interest rates). These articles were presented as authoritative financial advice to readers (Layer 1 Economic Terror).³⁴
- **Sports Illustrated:** Published articles by fake, AI-generated authors (e.g., "Sora Tanaka") with AI-generated biographies. This breaks the "chain of custody" for authorship itself—the writer does not exist.³⁵
- **Google AI Overviews:** In 2024/2025, Google's AI began citing satire (*The Onion*) and Reddit jokes ("glue on pizza") as factual sources.³¹

This represents the final "Layer 3" victory: the system no longer needs humans to misinterpret the data; it can manufacture its own "synthetic reality" in a closed loop. The "Telephone Game" is now played by machines talking to machines, and the human is merely a spectator to the hallucination.

Conclusion: The Shattered Chain

The evidence presented in this forensic analysis confirms that the "Chain of Custody" for truth in the modern media ecosystem is effectively broken.

1. **The Mechanism (Circular Reporting):** Allows falsehoods to gain the weight of facts through repetition and cross-citation (Wikipedia -> Media -> Wikipedia), effectively "laundering" the error into history.
2. **The Warped Mirror (Science Reporting):** Systematically strips away "Limitations" and "Conditions" to manufacture sensation, transmuting "rats" into "humans" and "supplements" into "red wine."
3. **The Driver:** This is not accidental. It is driven by the economic incentives of "The Rust" (Layer 1)—the need for speed, clicks, and ad revenue—and the psychological incentives of "Layer 3" (providing comforting lies like "chocolate causes weight loss").

Strategic Implication for the Phalanx:

For the "Sovereign Systems," this analysis validates the "Vertical War" doctrine. The "Mainstream Narrative" is not a record of reality; it is a "Constructed Miracle" of the enemy—a self-reinforcing illusion designed to keep the Gears spinning in the dark. The only defense is the **Master Salvager's Mandate**: Endure the noise, Deconstruct the source, and Salvage the raw data. Trust nothing that has not been traced back to the primary document. We must build our own archives, verify our own facts, and forge our own truth.

The Decomposition of Truth: Scientific Publishing vs. Media Reality

The trajectory of a scientific finding. At each stage, 'Uncertainty' (Hedging) decreases while 'Sensation' (Impact) increases, inversely proportional to accuracy.
